# Chiller Coolant 1000

ChemWorld Chiller Coolant 1000 is a proprietary Corrosion Inhibitor & Cleaner that is design for direct use for small chiller applications. Just add directly to your chiller to prevent corrosion and bacteria growth. Add direct. Do not dillute. This product may be mixed with Propylene Glycol. ChemWorld Chiller Coolant 1000is a non-propylene glycol solution. If you require a glycol based solution please refer to **ChemWorld SubZero.**

## ChemWorld Chiller Coolant 1000:

- Protects steel, copper, brass, aluminum and other metals from corrosion
- Penetrates, disperses and eliminates organic growth and deposits.
- Contains a blue colored indicator.
- Environmentally friendly and low-hazard.
- Designed as a ready to use product that should be added to the chiller system without diluting.
- Demineralized water based to provide improved heat transfer versus glycol.

## This product is formulated with:

- An anti-corrosion chemical to control corrosion.
- A biocide/algaecide to control bacteria growth.
- A food grade blue color indicator to identify the product is not water.
- It is disposable and environmentally friendly (non-toxic/easily disposable).
- Is considered safe for human contact.
- ISO manufactured

## It is compatible with the following materials:

- Viton (FKM)
- Nylon
- Epdm
- Hdpe
- Vinyl
- Polyetherimide (PET)
- PVC
- Ceramic
- Brass
- Copper
- Graphite
- Graphite
- 303 SS
- 304 SS
- 316 SS
- Rubber (TPE)

For other small chiller applications, please email us further information and we can custom blend for your specific application.
